Clean Technology

HIGHLIGHTS

- **An Expansive Client Base**
  We represent over 400 clients across numerous sectors, including emerging renewable energy companies, established entities developing and financing large-scale infrastructure projects, and large companies involved in significant energy initiatives, as well as leading VC firms, private equity firms, project investors, and lenders.

- **The Most Active Firm for Venture Financings in the Energy Sector**
  Wilson Sonsini ranked first as the most active firm for venture capital financing in the energy sector, according to PitchBook's global league tables for Q3 2020.

OVERVIEW

As the leading law firm to innovative technology and growth companies, Wilson Sonsini is uniquely positioned at the forefront of clean technology. Our team represents clients across the clean technology sector. Wilson Sonsini's attorneys have a combination of practical legal expertise and familiarity with clean energy innovations, including, for example:

- advanced energy generation (such as solar, wind, geothermal, biomass, waste-to-energy, natural gas, cleaner coal, and hydrokinetic)
- battery and other energy storage technologies
- energy efficiency
- transmission, distribution, and smart grid
- green building and bio-based chemicals
- electric vehicle, biofuels, and other transportation technologies

We also represent many of the leading venture capital firms, private equity firms, and energy project investors critical to the development and commercialization of those technologies.

With more than 400 energy and clean technology clients, Wilson Sonsini has built a strategic, integrated practice designed to meet a variety of complex and interconnected needs.
