Digital Health

HIGHLIGHTS

- **A Legacy of Representing Technology Innovators**
  Wilson Sonsini represents leading companies, and the investors that fund them, at the forefront of the rapidly developing Digital Health ecosystem.

- **A Cross-Functional Team of Digital Health Experts**
  Our multi-disciplinary group of attorneys have the technical and regulatory experience to guide clients through the complex digital health landscape.

- **Recent Representations Include Innovative Digital Health Start-Ups and Market-Leading Companies**
  In August 2019, Wilson Sonsini represented Babylon Health, a U.K.-based start-up developing AI-based health services, in its record $550 million Series C financing. In July 2019, the firm represented Livongo Health, Inc., in its IPO. In June 2019, the firm represented WageWorks, a leader in administering HSAs and complementary consumer-directed benefits, in its $2 billion acquisition by HealthEquity.

OVERVIEW

Wilson Sonsini’s digital health practice is a multi-disciplinary group comprised of experts who assist digital health clients in accessing the many areas vital to digital health, including privacy and security, advertising, patent, trade secret, licensing, regulatory, employment, litigation, and corporate. Our attorneys are responsive to our digital health clients’ unique needs and guide them through the complex digital health landscape, from consumer-driven health and wellness, to payer, provider, and employer-driven healthcare delivery, to industry-driven products and research.

Our practice supports startups and innovative business units within large companies by providing solution oriented, actionable legal advice that helps our clients navigate the dynamic digital health industry. Digital health—the convergence of technology and big data with a health-related focus—is a fast-growing sector with important implications for individuals and institutions alike. Whether it is healthcare providers using electronic medical record management and outcomes metrics to improve care, parents using wearables to monitor children with diabetes, or researchers harnessing precision medicine to design therapies to target tumors, the digital health industry represents a market that is poised for exponential growth. Our attorneys represent companies in the following digital health industry sectors, among others:

- Big data
- Care coordination
- Clinical administration
- Deep learning
- Diagnostics
- Disease management
- Electronic health/medical records
- Electronic medical assistants
- Enterprise health and benefits
- Fitness and wellness
- Genomics
- Imaging
- Patient engagement
- Population health management
- Telemedicine
- Remote monitoring
- Wearables and sensors

Our attorneys have advanced degrees in computer science, the natural sciences, and engineering disciplines, and they have broad experience including from the highest levels of federal and state government.
