HIGHLIGHTS

Wilson Sonsini Represents Leading Mobile Software and Device Manufacturers

Wilson Sonsini advises industry-leading companies in the mobile sector, from start-up app developers to wireless technology giants.

OVERVIEW

Mobile computing options for businesses and consumers include increasingly high-powered, connected laptops and tablets. Similarly, smartphones have evolved to meet the ever-growing demands for feature-rich devices while constantly becoming faster and more varied in size. As the market for mobile computing and communications expands, so do the opportunities for innovative companies, disruptive technologies, and even veteran hardware manufacturers.

As the premier provider of legal services to technology companies, Wilson Sonsini has worked with leading companies in the mobile sector, from start-up app developers to wireless technology giants. Given our representation of mobile clients, our attorneys have direct experience with technologies that include:

- LED display components
- Text, video, and voice messaging
- Digital media for mobile devices
- Mobile games
- Wireless technology standards, such as Bluetooth
- Holographic image projections for mobile devices
- Mobile banking and payment systems
- Wearable devices, including watches, bracelets, and eyewear
